

Gemini Digital Combination Lock 3700

Product Description

The Gemini 3700 digital combination lock is a small, easy to use electronic lock that is available in either digital or **mechanical** form.

Both versions share the same profile and fixing template, giving maximum flexibility and choice at the point of installation.

This innovative lock range is available in both flush and surface mount form and in a choice of standard or custom colours.

The small footprint and option of vertical or horizontal orientation make Gemini the perfect choice for a wide range of indoor applications only, including lockers, cabinets and cupboards.

Unique to all our digital code locks, you can use our steel override key to bypass the keyless locking feature when immediate supervisory access is necessary.
